Claim 1: Page 12: 7ipp: Japar ie.

The present sequence represent a Threel epitope peptide from Japanese cypress poblen antigen Chaol. The present invention describes peptides extraorespond to the Three epitope sites on Japanese cypress pollen antigens Chaol and Chaol. The reptides can be used as a respect for the diagnosis of alleray to Japanese cypress pollen, and as an antigen of the treatment and prevention of spring tree pollen disease in which the pollinosis involves reactivity to Japanese cypress pollen.
                                     16-JUN-1998 (first entry)
IT-cell epitope peptide 34 from Japanese cypress polien antigen Chaul.
Japanese cypress pollen: antigen: I-cell epitope: Chaol: Chaol:
Glagnosis: allergy: spring tree polien disease: politiosis.
Chamaeyparis obtusa.
                                                                                                                                                                 18-DEC-1997.

The present sequence represents a multi-epitope peptide which is used as a new immunctherapeutic agent. It comprises I cell epitope regions from 2 or more different allergens (preferably incked via arginine or lysine dimers), where the T cell epitope regions; have a positivity index allergen; have at least 70% reactivity index allergen; have at least 70% reactivity with lymphocytes from patients responding to the allergen; and are not restrive with immunoglobulin E (IEE) antibodies from patients responding to the allergen and are not restrive with immunoglobulin E be used to prevent and treat a wide variety of allergic diseases, e.g. by desensitisation, side effects, e.g. those mediated by 1gs, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                DNA encoding thamaecyparis obt..a pollen aliergen - I cell, epitope(s) of which are useful in development of preventative unit treating agent for C. obtusa pollen pollinosis Claim 2: Pages 10-11: Jopp: Japanese.

The present sequence is the C. obtusa pollen aliergen Cha C.; the Treeli epitopes of which can be used in the development of preventive and treating agent for C. obtusa pollen pollinosis.

C. obtusa pollen (2.4 kg) was devreased with diethyl ethyr and purified. RNA was extracted from C. obtusa pollen, and mkNA and conA derived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding charactyparis obtasa polich allerge. T relices bytrope(s) of which are useful in development of preventative and treating acout for cutusa police policies.

Claim E. Pages 11-12 17pp. Japanose.

Claim E. Pages 11-12 17pp. Japanose of the milergen Claim E. Pagest sequence is the C. Obtasa police pricele epitopes of which can be used in the development of preventive and treating agent for C. Obtasa pollen pollinosis.

Preventive and treating agent for C. Obtasa pollen pollinosis.

Obtasa pollen (2.4 kg) was deereased with diethyl ether, and died at room temp. Overnight. Cha oliwas sept. from it and Duriffied, RNA was extracted from C. Obtusa pollen, and mRNA and

Wolfied Cryptomeria Japonica (Cry j) I peptide(s) - useful for treating allergy to Japanese cedar pollen allergen or treating allergy to Japanese cedar pollen allergen or immucologically cross reactive allergens.

Sischosure: Floure 2: 60pp: English.

Novel peptides of cry j: have been modified as a part of a preformulation scheme to develop an optimised drug product for therapeutic treatment of humans suffering from allergy to Japanese cedar pollen allergen or an allergen witch is immunologically cross reactive with Japanese cedar pollen allergen which render them particularly possess certain characteristics which render them particularly cossess certain characteristics which render them particularly modified and unrodified, are given in RR84491/882525. This peptide fragment corresponds to amino acids 311-330 of the allergen mature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                               allersy Disclosure: iq 16: 137pp: English. Disclosure: iq 16: 137pp: English. The sequence is that of Jun s I, a homologue of the Japanese cedar police allergen Cry j I. Antigenic peptides derived from it can be used for the treatment and diagnosis of allergies associated Sequence :57 AA:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  claim 1/2. Fig 13: 137pp; English.
The sequence is that of an isolated peptide of the Japanese cedar pollen allergen Cry j I (amino acids 311-330). The peptide. CJI-32, can be used for the treatment and diagnosis of allergies associated with Japanese cedar pollen. It has enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens. Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Scie

allergy claim 76, Fig 18: 137pp; English.

The sequence is that of an isolated peptide of the Japanese cecur; pollen allergen Cry 1. The peptide, CJI-44.1, can be used for the treatment and diagnosis of allerques associated with Japanese cedar pollen. It has enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens.
               Antigens derived from Japanese codar pollen allergen Cry ) : contain at least two T cell epitope(s), used to treat or diagnose

Claim 8: Pages 19-20: Zipp: Japanese.
Claim 8: Pages 19-20: Zipp: Japanese.
W80339-58 represent epitopes for T ceils, derived from the sugi allergen
proteins Cryil (W80394-44, W80350-53 and W80356-58) and Cryj2 (W80345-49
and W80354-55). The peptides are useful for the treatment of
sugi-pollinosis, an allergic reaction of the body to pollen.

                                                                                                                                                                                                                                                             0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0
                                        See K83389 is a negative control having no homology with human Pas. P1-P16 were used in an ELISA, which demonstrated that novel murine anti-inman Fas monoclonal antibody HFDA specifically binds an amino acid sequence contained in P11. The epitope (see W8333) was subsequently identified. The invention provides humanised HFDA antibodies (see W8331-37) produced by CDR grafting. These antibodies are capable of inducing apoptosis in abnormal cells expressing Fas, and of inhibiting fas induced apoptosis in normal cells. They are used to evaluate, in animal models, treatments of diseases that involve Fas/Fas ligand interactions, and also to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Caps
                                                                                                                                                                                                                                                               Gaps
Synthetic peptides P1-P15 (see W83043-57) are partial sequences of amino acids 1:157 of the extracellular domain of human Fas, with between 9 and 11 amino acid residues overlapping one another. P16
                                                                                                                                                                                                                                                                                                                                                                                                                    Sugi allergen protein Crýj2 derived epitope for T cells.

Modified Cryptomeria japonica (Cry !) I peptide(s) - useful for treating allergy to japanese cedar pollen allergen or immunologically cross reactive Pleaders.

So Claim I: Figure 3: 66pp. Englis.

So Claim I: Figure 3: 66pp. Englis.

Novel peptides of cry i lavet ben modified as a part of a preformulation scheme to develor an optimised drug product for therapeutic treatment of humans suffering from allergy to Japanese cedar pollen allergen or an allergen which is immunologically cross reactive with Japanese cedar pollen allergen or an allergen which is immunologically cross centure with Japanese cedar pollen allergen from allergen by the allergen of modified periods situation. Such modified and uncodified, are given in RES491 RRESSS Tils peptide is one of three modified peptides (See R92178-60).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Saps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12-MAK-1996 (first entry)
Japanese cedar pollen allerden Cryj I.
Japanese cedar pollen allergen; Cryj I. Trcell epitope; peptidos:
prevention: treatment: cryptomeria pollinosis.
Cryptomeria japonica.
                                                                                                                                                                                            Claim 75: Fig 18: 137pp: English.

The sequence is that of an isolated peptide of the Japanese cedar pollen alloraen Cry 7 1. The peptide, CJ144, can be used for the treatment and diagnosts of allorates associated with Japanese cedar pollen. It has enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens.
                                                                                                                    Antigens derived from Japanese redar pollen allergen Cry j I - contain at least two T cell epitope(s), used to treat or diagnose allerny fs. Fig. 137gp. English.

New Peptide(s) derived from cedar police allergens - activate

New Peptide(s) derived from cedar police allergenspecific [gE actitables.]

Tallergen-specific T-cells, but not allergen-specific [gE actitables.]

Softhetic peptides based on portions of cedar pollen allergens R.

Synthetic peptides based on portions of cedar pollen allergens R.

Synthetic peptides based on portions of their ability to activate cedar allergen specific T-cells but not allergen-specific [at antibodies. 6 Peptides (R8158) were includies. 6 Peptides (R8158) were includies. These peptides (R8158) were includies. These peptides (R8158) were includied as T-cell collinosis. avoiding side-effects such as anaphylaxis.

Sequence 353 AA:
cedar pollen allergen B.
Cedar pollen allergen B.
Cedar: pollen; allergen; immuncajobulin E; igE; T-ceil epitcen:
antibody; pollinosis; therapy: immuncaherapy.
Cryptomeria japonica.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 17.862; Variance 55.722; scale 0.321

I Submitted (JUL-1995) to the EMBL/GenBank/DBS databases.

I FUNCTION: INVOLVED IN PERCAISOME BIOSYNTHESIS. MAY FUNCTION AS A RECEPTOR PROTEIN. LACK OF THIS PROTEIN CAUSES THE CYTOSOL OF PERCAISOMAL MATRIX PROTEINS.

C. TOSOL OF PERCAISOMAL MATRIX PROTEINS.

C. TOSOL OF PERCAISOMAL MATRIX PROTEINS.

C. TINUCTION: BY OLEIC ACID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sing
*PAS3, a Saccharomyces cerevisiae gene encoding a peroxiscmal
integral membrane protein essential for peroxisome blogenesis.

Submitted (NOV-1997) to the EMBL/Genback/UCBJ databases.
FUNCTION: THIS IS A KEY ENZYME OF PLANT METABOLISM CA:ALYZINS THE FIRST REACTION IN THE BIOSYNTHESIS FROM L'PHENYLALANINE OF A WICE VAREETY OF NATURAL PRODUCTS BASED ON THE PHENYLHOPANE SKELETON:
CATALYZIO ACTIVITY L'PHENYLALANINE - TRANS-CINNAMATE - NH(3).
CATALYZIO ACTIVITY L'PHENYLARANINE - TRANS-CINNAMATE - NH(3).
COFACTOR: HAS A DEHYNDRACALNINE (DHA) IN THE ACTIVE SITE
COFACTOR: HAS A DEHYNDRACALNINE (PROBBLE).
SUBCELLULAR LOCATION: CYTOPLASMIC (PROBBLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5.1 p.

Such modified peptides possess certain characteristics which render them particularly suitable for drug product formulation. Prepride frauments of Cry J. modified and unreditied are given in Re2491 Re2518. This peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                            allergy claim. In 13: 137pp; Enailsh.
The sequence is that of an isolated peptide of the Japanese cedar. The sequence is that of an isolated peptide of the peptide, CJI-11. can be used for the freatment and diagnosis of allergies associated with Japanese cedar polien. It has enhanced therapeitic properties but reduced side effects compared to naturally occurring allergens. Sequence

T cell epticope peptide of sugi polien antiaen - useful in the ireatment of sugi pollinosis.

T cell epticope peptides (44682-88 and their derivatives react with sugi pollinosis patient peripheral blood T lymphocytes. A composition prepared by combining at least 2 of the above peptides and/or their derivatives, is used for the prevention and ireatment of sumi pollinosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              be used to prevent and treat a wide variety of alieraic diseases, e.g. by desensitisation. Side effects, e.g. those rediated by Tab. are induced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 6. Page 31. 58pp. Jepan. c.
The present sequence represents a multi-epitope peptide which is used as new immunotherapeutic agent. It comprises T cell epitope requois from 2 or more different allergens (preferably) linked via archinne of ysine dimers), where the T cell epitope regions: have a positivity index allergen. To cell epitope regions: have a positivity index allergen. have at least T 08 eventivity with ymphosytes from patients responding to the responding to the allergen. But and are not reactive with immunoal billin E (192) antibodies from patients responsive to the allergen. The Jernin can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ċ

Multi-epitope peptide used as immunotherapeutic agent #1.
Multi-epitope peptide; immunotherapeutic agent; allergic disease:
T-cell epitope region; allergen; lymphocyte; immunoglobulin E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          24-MAR-1998 (first entry)
Multi-epitope peptide used as immunotherapeutic agent #2.
Multi-epitope peptide immunotherapeutic agent; allergic disease;
T-cell epitope region; allergen; lymphocyte; immunoglobulin E.
Syntheric.
W99732600-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI: 97-477495/43.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PARTITION OF THE PRODUCT OF THE PROD
                                                                                                                                                                                                                                                                                                              The present sequence represents a multi-epitope peptide which is used as a new lammachterapeutic agent. It comprises I cell epitope regions from 2 or move different allergents (I comprises I cell epitope regions from 2 or move different allergens (Preferably linked via arginine or lysine dimers), where the I cell epitope regions; have a positivity index director have at least 70% reactivity with lymphocytes from patients responding to the allergen; and are not reactive with immunoquobulin E (IGE) antibodies from patients responsive to the allergen. The agent can describe the patients responsive to prevent and treat a wide variety of allergic diseases, e.g. by desensitisation. Side effects, e.g. those mediated by IGE, are reduced. R75388 is the Japanese cedar rollen allergen Cryj I, from which the T-cell epitope peptides R892. R89255 were derived. The peptides Can be used for the preventics and treatment of cryptomeria pollenosis, and also for the investigation of pollinosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New peptide(s) derived from cedar pollen allergens - activate allergen-specific T-cells, but not allergen-specific IgE antibodies, used for treating cedar pollinosis.

Claim 5: Page 31-32: 36pp; English.

Synthetic peptides based on portions of cedar pollen allergens A (R81586) and B (R81587) were tested for their ability to activate cedar allergen-specific T-cells, but not allergen-specific IgE antibodies. 6 Peptides (R81580-R81585) were identified as T-cell epitopes. These peptides, plus subsequences (R81573-79) essential for T-cell recognition, and homologous peptides (R81588-95) can be used as immunotherapeutic agents to treat or prevent cedar pollinosis, avoiding side-effects such as anaphylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sars
                                                                                                                                                                                                                                                                                                                                                                                    New cryptomeria pollen allergen T-cell epitope peptide - used for

Fresh pollen and staminate cone samples were collected from a single Cryptocorial approvice (Japanese cedar) tree. RNA was prepd. and used to synthesise cENA. The subjected to successive rounds of PCR to yield a full length Cry 3 I alone. Cry 3 I or an antiqenic fragment of it may be used for detecting, treating and preventing an aileror response to Japanese sedar pollen allargen. It is capable of modifying both the B and I cell response to a Cry 3 I and 7 cell response to a Cry 3 I and 7 cell response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         15-Apk-1996 (first entry)

Modified Cryptomeria japonica (Gry j) I peptido(s) - useful for treating allergy to japanese cedar pollen allergen or immunologisally cross reactive allergens
Disclosure: Flgure 1: 60pp: English.
Novel peptides of cry j I have been modified as a part of a preformulation scheme to develop an optimised drug product for therapeutic treatment of human suffering from allergy to Japanese cedar pollen allergen on an ai ergen which is immunologically cross reactive with Japanese cedar pollen allergen. Such modified peptides possess certain characteristics which render them particularly modified and unmodified, are given in R82491-R82525.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Saps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24-MAR-1995 (first entry)
Japanese cedar pollen antigen Gryjl.
Japanese cedar: pollen antigen: allergen: Cryjl: sugi: polinnosis.
Cryptomeria japonica.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigens derived from Japanise cedar pollen alleraed fry ) in contain at least two T cell Pytope(s), used to treat or distances.
